

Nexora Technologies — Password Management SOP

Synthetic portfolio document for the ResolveAI enterprise knowledge assistant. Fictional content for learning and demonstration.

Password requirements

Corporate passwords must be at least 12 characters long and should not contain easily guessed personal information. Employees must not reuse corporate passwords on personal websites.

Password changes

Employees must change passwords when required by the identity platform or when compromise is suspected. After changing a password, users may need to sign in again to VPN, email, and other services.

Suspected compromise

If an employee believes a password has been exposed, they must change it immediately and report the incident through the approved security reporting process.

Credential storage

Employees must not store corporate passwords in plain-text files, chat messages, spreadsheets, or unapproved browser notes. Use the approved enterprise password manager where available.
